

CONTENTS

PREFACE	xix
Chapter 1: INTRODUCTION TO TCP/IP	1
THE POPULARITY OF TCP/IP	1
THE AS/400 AND TCP/IP	2
AS/400 Support for TCP/IP	2
A Change of Roles for the AS/400 Is A Good Thing	3
WHAT IS TCP/IP?	3
TCP/IP Routing and Data Delivery Support	4
Low- and High-Level Communications Support	4
THE TCP/IP PROTOCOL STACK	4
TCP/IP UTILITIES	5
SUMMARY	7
Chapter 2: TCP/IP TERMS AND CONCEPTS	9
WHAT IS A PROTOCOL?	10
ROUTING IN A TCP/IP NETWORK	10
PACKETS	11
HOSTS	12

INTERNET PROTOCOL ADDRESSING	12
IP Address Notation	12
Network ID and Host ID	14
IP Address Classes	14
Class Divisions of IP Addresses and You	15
Subnetworking	15
Using a Subnet Mask to Define a Subnetwork	16
Using Part of a Byte in a Subnet Address	18
THE DOMAIN NAME SYSTEM (DNS)	19
Domain and Host Names	19
ASSIGNING IP ADDRESSES TO HOST NAMES	22
Hosts Tables	23
Domain Name Service	24
AS/400 Interfaces	24
Ports	24
TCP/IP Utilities and Their Well-Known Ports	25
Reserved Ports 1 through 1023	25
What You Need to Know about TCP/IP	26
SUMMARY	26
Chapter 3: CONFIGURING BASE TCP/IP ON THE AS/400	29
USING THE CLIENT ACCESS OPERATIONS NAVIGATOR	30
Preference for the Operations Navigator	30
REQUIRED USER AUTHORITY FOR CONFIGURATION TASKS	30
CONFIGURING A LINE FOR LAN COMMUNICATIONS	30
Determining Your Installed LAN Hardware	31
Checking for a Line Description	32
Creating a Line Description for a LAN	33
CREATING AN AS/400 TCP/IP INTERFACE FROM AN AS/400 COMMAND LINE	33
Activating an AS/400 Interface	36
Testing an AS/400 TCP/IP Interface with Ping from a DOS Prompt	36
Creating an AS/400 TCP/IP Interface with Operations Navigator	37
LOCAL DOMAIN AND HOST NAMES	41
Defining Local Domain and Host Names from an AS/400 Command Line	42
Defining Local Domain Names and Host Names with Operations Navigator	43
ASSOCIATING YOUR AS/400's HOST NAME AND IP ADDRESS	44
Using Hosts Tables to Associate IP Addresses	45
USING A DOMAIN NAME SERVICE SERVER TO ASSOCIATE IP ADDRESSES	49

CONFIGURING YOUR AS/400 AS A DNS SERVER	49
Starting the AS/400 DNS Server Automatically	53
Enabling a Windows PC to Use a DNS Server	53
Testing Your Configuration	54
SUMMARY	54
Chapter 4: CONFIGURING TCP/IP ON A WINDOWS PC	57
PC CONNECTION METHODS	58
Connection of Locally Attached PCs	58
ADDING TCP/IP SUPPORT TO A WINDOWS PC	58
INSTALLING CLIENT FOR MICROSOFT NETWORKS SUPPORT	60
IDENTIFYING YOUR PC TO THE NETWORK	61
Explicitly Setting an IP Address, Domain Name, and Host Name on a Windows PC	62
Making Your PC's Host Name Known to the Network	64
Configuring a PC to Use a Name Server	65
Testing Your Host Identification Settings	66
FILE AND PRINTER SHARING ON A WINDOWS PC	68
Enabling File and Printer Sharing on a Windows PC	68
Testing File and Printer Sharing	71
SUMMARY	75
Chapter 5: CONFIGURING AS/400 POINT-TO-POINT PROTOCOL	77
WHAT IS POINT-TO-POINT PROTOCOL?	77
What You Can Do with AS/400 Point-to-Point Protocol	78
REQUIREMENTS FOR AS/400 PPP	79
PREREQUISITE BASIC TCP/IP CONFIGURATION	79
SWITCHED AND LEASED PHONE LINES	80
INSTALLING WINDOWS SUPPORT FOR DIAL-UP NETWORKING	81
Checking for Windows Dial-Up Networking Support	81
Installing Windows Dial-Up Networking Support	82
CONFIGURING POINT-TO-POINT COMMUNICATIONS ON THE AS/400	83
The Hardware Setup for PPP	83
AS/400 PPP Connection Profiles	83
Point-to-Point Configuration Examples	84
PPP Direct-Dial Access Example	85
Creating a Connection Profile for Direct-Dial Access	85
Point-to-Point TCP/IP Settings	88

CONTENTS

ENABLING A CONNECTION PROFILE	90
CONFIGURING A DIAL-UP CONNECTION ON A WINDOWS PC	90
SUMMARY	93
Chapter 6: ATTACHING AN AS/400 TO THE INTERNET WITH DIAL-UP NETWORKING	95
USING DIAL-UP NETWORKING TO CONNECT AN AS/400 TO THE INTERNET	95
WHAT YOU NEED TO CONNECT AN AS/400 TO THE INTERNET	96
CREATING A CONNECTION PROFILE FOR CONNECTION TO THE INTERNET	97
Possible Connection Problems	101
ACCESSING THE AS/400 FROM A PC ATTACHED TO THE INTERNET	101
Checking the IP Address Assigned by the Internet	101
Checking Your AS/400's Connection to the Internet with Ping	102
SUMMARY	104
Chapter 7: TCP/IP UTILITIES OVERVIEW.	105
TCP/IP UTILITIES AND WELL-KNOWN PORTS	106
A Server Program Must Be Listening	107
STARTING HOST SERVERS ON THE AS/400	108
CONFIGURING AS/400 SERVERS WITH THE OPERATIONS NAVIGATOR	108
AS/400 Port Restrictions	109
SUMMARY	110
Chapter 8: CONFIGURING AND USING AS/400 TELNET.	113
WHAT IS TELNET?	113
Telnet Has a Server Part and a Client Part	114
CONFIGURING THE AS/400 TELNET SERVER	114
Related AS/400 Systems Values	115
CONNECTING TO THE AS/400 WITH A TELNET CLIENT	117
VT Keyboard Mapping with Telnet	118
SUMMARY	121
Chapter 9: CONFIGURING AND USING AS/400 FILE TRANSFER PROTOCOL.	123
OVERVIEW OF FILE TRANSFER PROTOCOL	123
WHAT YOU CAN DO WITH FILE TRANSFER PROTOCOL	124
The Major Shortcoming of AS/400 FTP Support	125
ASCII, EBCDIC, and Binary Transfer Types	125
FTP Client and FTP Server	126

CONFIGURING AN AS/400 AS AN FTP SERVER	126
AS/400 FILE NAMING SYSTEMS	128
FTP SUBCOMMANDS	129
Windows FTP Subcommands	129
AS/400 FTP Subcommands	131
FTP Return Codes	133
A Typical Subcommand Sequence	134
Starting an FTP Client Program from the AS/400	135
Starting an FTP Client Program from Windows	136
Transferring an AS/400 File	137
EXAMPLES USING FTP TO TRANSFER FILES	137
Accessing an AS/400 FTP Server with a Windows PC	138
EXECUTING A SUBCOMMAND ON A REMOTE HOST	142
EXECUTING CL COMMANDS ON THE AS/400 FROM A WINDOWS PC	142
SUMMARY	144
Chapter 10: NETWORK CONFIGURATION AND MANAGEMENT UTILITIES. 147	
OVERVIEW OF NETWORK MANAGEMENT UTILITIES	148
BOOT PROTOCOL (BOOTP) AND TRIVIAL FILE TRANSFER PROTOCOL (TFTP)	148
Configuring BOOTP and TFTP	149
TRIVIAL FILE TRANSFER PROTOCOL	151
Configuring TFTP	151
BOOTP/DHCP RELAY AGENT	153
Configuring BOOTP/DHCP Relay Agent	153
DYNAMIC HOST CONTROL PROTOCOL (DHCP)	154
DHCP Considerations	155
Configuring AS/400 DHCP	156
CONFIGURING A WINDOWS PC FOR BOOTP OR DHCP	161
SIMPLE NETWORK MANAGEMENT PROTOCOL (SNMP)	162
SMNP Managers and Agents	162
The Management Information Base (MIB)	163
Configuring the AS/400 SNMP Agent	165
ROUTE DAEMON (ROUTED)	169
Configuring RouteD	169
TCP/IP MANAGEMENT TOOLS	170
Displaying Installed Hardware with the Operations Navigator	170
Work with Configuration Status (WRKCFGSTS)	170
Ping (Packet Internet Groper)	171

NETSTAT	171
QTCP Message Queue and Joblogs	173
Work with Subsystem Jobs—WRKSBSJOB SBS(QSYSWRK)	174
SUMMARY	177
Chapter 11: E-MAIL ON THE AS/400	179
AS/400 E-MAIL CAPABILITIES	179
The Relationship between SMTP and POP3	181
THE SMTP AND POP SERVERS	181
Determining if You Should Run SMTP and POP	181
SIMPLE TCP/IP MAIL AND MIME MAIL	184
AS/400 TCP/IP E-MAIL FUNCTIONS AND SNADS	184
The SNADS Extended Bridge Function	185
The AS/400 System Directory	186
The AS/400 System Alias Table	187
Automatic Registration of Users in the AS/400 System Directory	188
CONFIGURING SMTP AND POP	190
Configuring Basic AS/400 SMTP and POP Support	191
Registering Users for AS/400 E-Mail	194
CONFIGURING A WINDOWS PC FOR E-MAIL	199
Netscape E-Mail Configuration	199
Outlook Express E-Mail Configuration	200
OFFICEVISION/400 AND GREEN-SCREEN	
USERS' PARTICIPATION IN AS/400 E-MAIL	204
Sending E-Mail from a Green-Screen Session	205
Receiving E-Mail with a Green-Screen Session	205
Sending MIME E-Mail to an OfficeVision User	206
SUMMARY	207
Chapter 12: AS/400 WEB SERVER FUNCTIONS	211
HTTP SERVER FUNCTIONS	212
The Participants in a Web Server and Browser Platform	212
Web Server Models	213
How HTTP Works	214
HTTP Server Instances	215
Hypertext and Universal Resource Locators (URL)	215

HTTP SERVER CONFIGURATION	216
HTTP Configuration Precedence	216
Two Ways to Configure the AS/400 HTTP Server	217
HTTP SERVER DIRECTIVES	221
HTTP Directive Statements	222
Essential HTTP Directives	223
AS/400 WORKSTATION GATEWAY (WSG)	235
A Good Fit for WSG	236
CONFIGURING WORKSTATION GATEWAY	237
Accessing the WSG Server with a Web Browser	239
COMMON GATEWAY INTERFACE (CGI)	240
The CGI Model	240
The Sequence of Events in the CGI Model	241
Configuring HTTP for CGI	243
AS/400 NET.DATA	244
Language Environments	244
Net.Data Macros	245
Using Net.Data	247
SUMMARY	248
Chapter 13: TCP/IP UTILITIES	253
LINE PRINTER REQUESTER (LPR) AND LINE PRINTER DAEMON (LPD)	254
Configuring LPD	254
Using LPR	255
DISTRIBUTED DATA MANAGEMENT	257
Configuring and Starting the DDM Server	258
AS/400 NETSERVER	258
Co-Existence of NetServer and Client Access	259
Configuring NetServer	259
Using NetServer	265
SUMMARY	268
Chapter 14: USING TCP/IP EXIT PROGRAMS	271
AS/400 EXIT PROGRAMS	271
EXIT PROGRAM CALL MECHANISM	273
Exit-Point Interfaces	273
A SIMPLE SECURITY EXIT PROGRAM EXAMPLE	274

CONTENTS

EXIT POINTS FOR TCP/IP	277
Exit Programs for FTP	277
Anonymous FTP Programs	277
FTP Exit Point Mechanisms	278
The Validate a Server Request Exit Program	281
Example Programs for Anonymous FTP	283
SUMMARY	290
Chapter 15: AS/400 CLIENT-SERVER	
PROGRAMMING WITH TCP/IP SOCKETS	293
CREATING A TCP/IP SERVER PROGRAM WITH RPG IV	293
Much Like Coding a Traditional Display File Program	294
Best AS/400 Client/Server Performance Available	294
Client Access Is Not Required, But Ethernet, Token-Ring, or PPP Is	295
TCP/IP Is a Family of Protocols	295
WHAT'S A SOCKET?	296
Some Sockets Are Well-Known	296
Seeing Which TCP/IP Ports Your AS/400 Is Using	296
Ports Assignments on the PC	298
Restricting AS/400 Ports	299
A Socket Server Must Listen First	299
THE AS/400 TCP/IP API	299
RPG IV TO THE RESCUE	299
Stream Data	300
A MAIN SERVER PROGRAM AND SPAWNED SERVER PROGRAMS	300
THREADS	301
Starting a Spawned Server Job with SBMJOB	301
STARTUP TIMING BETWEEN CLIENT AND SERVER	301
THE SOCKETS API	302
RPG IV PROCEDURES	303
Creating a Procedure Prototype	304
Defining Variables and Structures as Arguments to an API Routine	304
Executing a Procedure by Using the Procedure Name in an Eval Expression	306
THE MAIN SERVER PROGRAM	306
AS/400 Security in a TCP/IP Application	307
Main Server Program Listing	308
THE SPAWNED SERVER PROGRAM	320
COMPILING RPG IV PROGRAMS FOR TCP/IP API USE	331
ADDITIONAL SERVER-SIDE PROGRAMS	331
SUMMARY	332

Chapter 16: CREATING A TCP/IP CLIENT

- PROGRAM WITH VISUAL BASIC 337**
- THE EXAMPLE APPLICATION 338
- THE CLIENT PROGRAM FLOW 338
 - The Application Protocol 339
 - The WinSock Control 340
 - The Client Program Listing 341
- CREATING YOUR OWN APPLICATION 353
- SUMMARY 353

Appendix A: AS/400 ANYNET 355

- CONFIGURING AS/400 ANYNET TO
 - ALLOW APPC COMMUNICATIONS OVER TCP/IP 356

Appendix B: SOFTWARE LOADING INSTRUCTIONS 359

INDEX. 361
