# Index

## A

- accelerators for SSL, 561
- ace.bat file, **759–760**
- active coordinator, high availability manager and, 345–346, **345, 346**
- active protocol list options, security and, 477, **478**
- adapter beans, dynamic caching and, 456
- admin console, 20, **20**
  - application server and, 53, 91–92, **92**
  - database session persistence and, testing connection using, 329–330, **330**
  - HTTP Server management in, 22, **22**
  - logging problems and, access to, 80–81, **81, 82**
  - Network Deployment package deployment manager and, connecting to, 202
  - Network Deployment package product binaries and, 159–160, **160**
  - port configuration and, 59–60, 197–198
  - upgrades and, 94–96, **95, 96**
  - verifying installation through, 68–69, **68, 69**
- admin roles in security, 513–514, **514**
- admin server
  - application server, 6–7
  - Network Deployment package product binaries and, 154, 157, 160, **160**
- administrative privileges for setup, 32
- administrator identification for security, 480, **481, 487–488, 488, 496–497, 497**
- AdminTask global object, 23
- advisors function of Dispatcher, 354
- AIX
  - administrative privileges for setup of, 32
  - loopback adapter configuration on, 364–366, **365**
- Apache Monitor tool, HTTP Server (IBM) and, 124–125, **125**
- Apache Web Server, HTTP Server and, 9
- applet containers, packaging in J2EE and, 701
- application assembler, packaging in J2EE and, 703
- application client containers, packaging in J2EE and, 701
- application client JAR files, packaging in J2EE and, 702
- application component provider, packaging in J2EE and, 703
- application scope, 23
- application servers, 6–9, **6, 25, 51–87, 89–110**
  - adding new feature to existing installation of, 96–99, **97, 108–110**
  - admin console and, 53, 84, 91–92, **92**
  - admin server in, 6–7
  - application-update capabilities in, 23
  - architecture and components of, 52–53, **53**
  - backup and recovery in, 101–102, **101, 102, 103**
  - Base package and, 52, 53
  - bin directory in, 64, 93–94
  - creating, on custom profile node after federation, 245–248, **246, 247, 248**
  - custom installation option for, 58, **59**
  - default applications (snoop, hello, hitcount) in, 69–72, 83
  - default creation of, 8
  - DefaultApplication application for, 53
  - directory setup for, 52, 52*t*, 54, **55, 58, 58, 63, 64–65, 64**
  - disk space requirements for, 56
  - domain name server (DNS) and, host names, 62

- application servers, *continued*
  - dynamic caching and, 443–447, **444–447**
    - configuration for, 438–447
    - external caching, 449–451, **450**
  - EJB container in, 7
  - Embedded HTTP Server (EHS) in, 7
  - essential steps in, 52–53
  - Express package and, 52, 53–64
  - federating nodes and, 35–37, **35, 36, 37**, 242–245, **243, 245**
    - cell management of, 249–251, **250**
  - file transfer applications in, 53
  - First Steps tool to verify installation of, 63, 67–68, **67**
  - fixes for, applying, 63–64
  - flow chart for installation of, 53–54, **54**
  - horizontal cluster creation for, 41–42, **41**
  - horizontal clustering with highly available/workload-management (HA/WLM) for, 18–19, **19**
  - host names for, 61–62, **61**
  - installation directory for, 52
  - installation failure and, 82–83
  - installation. *See* silent installation of, below
  - IP addresses and, host names, 62
  - J2C service in, 7–8
  - Java Virtual Machine (JVM) in, 6
  - JNDI naming server and, 8
  - Launchpad program for, 56, 57–58
  - license agreement for, 57
  - logging in, 56, 57–58, 63, 78–87
    - admin console access to, 80–81, **81, 82**
    - admin console problems and, 84
    - default application failure and, 83
    - installation failure and, 82–83
    - InvocationTargetException errors and, 84–86, **85**
    - log files for, categories of, 78, 79–80
    - logging architecture for, 78, **78**
    - port configuration errors and, 86, 87, **87**
    - problem scenarios covered by, 82–87
  - logs directory in, 64
  - managing, 89–94
  - messaging engine configuration for, 8, 72–73, **73**
  - multiple Web servers with multiple application server profiles and, 170–175, **171–175**
  - multiple, Deployment Manager admin console to manage, 16–17, **17**
  - Network Deployment package and, 51
    - profile creation for, 183, 207–216, **208**
  - network interface cards (NICs) and, host names, 62
  - node names for, 61–62, **61**, 84–86, **85**
  - PlantsByWebSphere application for, 53, 100, **100**
  - port configuration for, 59–61, **60**, 86, 87, **87**, 105
  - product binaries and configuration repository in, 53
  - profiles for, 8–9, **9**, 33–34, **33**
    - command prompt for, 74
    - creation of, 52, 53, 65, **65**, 73–77, **74**
    - default vs. subsequent, 75–76
    - deletion of, 93
    - directory for, 65, 76, 77, **77**
    - naming the profile in, 75, **75**
    - node and host names for, 76
    - port configuration for, 76, **76**
    - Profile Creation Wizard for, 74–76
    - starting a particular profile in, 90–91, **91**
    - verifying creation of, 77
    - Windows services for, choosing, 77
  - profileTemplates directory in, 65
  - registering and downloading software for, 54
  - Sample applications for, 65
    - choosing to install, 59, **59**
    - deploying, 98–99, **98, 99**
  - Secure Sockets Layer (SSL) and, configuration for HTTP server and, 584–592
  - security server in, 8
  - Service Integration Bus (SIBus) and, 8, 72–73, **73**
  - silent installation of, 104–110, **107**
    - Cell option for, 106
    - directory setup for, 104
    - installation directory for, 105, 108
    - Javadoc installation in, 105
    - port configuration in, 105
    - response files for, 104–105
    - sample application installation in, 105
    - upgrading or adding features through, 108–110
    - verifying installation in, 108, **108**
    - Windows service option for, 106
  - starting enterprise applications on, 92, **92**
  - starting, 89–90, **90**
  - stopping enterprise applications on, 92
  - stopping, 89–90
  - system prerequisites for, 57–58
  - template for, 8–9, **9**
  - temporary (TMP) directory setup for, 55, **55**
  - unconfiguring Web server definition from, 177–178, **178**
  - uninst directory in, 65
  - uninstalling enterprise applications on, 92–93
  - uninstalling, 102–103
  - update installer tool for, 606, 607–608
  - upgrading, 94–96, **95, 96**, 108–110
  - verifying installation of, 63, 66, 108, **108**
    - admin console for, 68–69, **68, 69**
    - browser for, using default application for, 69–72, 120
    - First Steps tool for, 63, 67–68, **67**
    - hello servlet for, 70, **70**
    - hitcount servlet for, 70–72, **71**
    - log files for, 66, **66, 67**

snoop servlet for, 69–70, **70**  
 Windows services for, 72  
 verifying status of, 91  
 Web container in, 7  
 Web services engine in, 7  
 WebSphere Rapid Deployment (WRD) and, 23, 50  
 welcome panel for, **57, 57**  
 Windows service and, 63–63, **63**, 106, 630–632, **631, 632**  
 xclock or xeyes command for, in Unix systems, 56, **56**

Application Server Toolkit (AST), 4, 50, 717  
 WebSphere Rapid Deployment (WRD) and, 731  
 application server trace service, management of, 664–665  
 application-update capabilities, 23  
 architecture, 1–24  
 assembler, application, packaging in J2EE and, 703  
 authentication, 469  
 lightweight directory access protocol (LDAP) and, 493  
 authorization, 469  
 AutoAppInstall mode, WebSphere Rapid Deployment (WRD) and, **732–733**

## B

backup and recovery  
 application server and, 101–102, **101, 102, 103**  
 BackupConfig archive and, 684–685, **685–686**  
 cells of federated application server nodes and, 251  
 HTTP Server (IBM) and, 125–126  
 Network Deployment package application server profile and, 216  
 Network Deployment package deployment manager and, 204–205  
 plug-in for HTTP Server and, 175  
 product update installation and, 612, **612**  
 RestoreConfig archive and, 686, **686–687**

BackupConfig archive, 684–685, **685–686**  
 backupConfig utility, 101–102, **102**  
 Bank. *See* WebSphere Bank  
 Base package for WAS v. 6, 2–5, **4**, 11–12, **11, 12**  
 application server and, 52, 53–65. *See also* application servers  
 HTTP Server (IBM), 9–10  
 profile creation in, 8  
 unsupported architectures in, no spraying, 12, **12**

bin directory  
 application server and, 64, 93–94  
 HTTP Server (IBM) and, 122

binary files, multiple instance sharing of, 21  
 bootstrap port configuration number, 61, 198

## C

cache replication, 462–463, **463**  
 cache timeout values, security and, 477, **478**, 484, 486, 494  
 Caching Proxy, 435. *See also* dynamic caching  
 Cascading Style Sheets (CSS), 9  
 cells, 13–14, **13**  
 backup and recovery in, 251  
 Deployment Manager and, 13–14  
 Deployment Manager profile for, 32–33, **32**  
 federating nodes and, 35–37, **35, 36, 37**  
 managing cells of application servers after, 249–251, **250**  
 Network Deployment package deployment manager and, naming, 196–197, **197**  
 nodes in, 13–14, **13**  
 security and, 483–487  
 synchronization issues of nodes in, 495–496, **496**

certificate authority certificates, 575–583  
 Secure Sockets Layer (SSL) and, 559

class loader, 693, **693**  
 class loading schemes, Java 2 Enterprise Edition (J2EE) and, 705–707

client applications, tracing and, 663–664  
 client gateway address, content-based load balancing and, 400–401, **401**

Cloudscape database, 5, 717

cluster IP addresses, Load Balancer and, 354–355  
 clustering (horizontal and vertical), 14, 25, 285–308  
 configuration of resources and variables in, 23  
 content-based load balancing and, 401–402, **402**  
 custom profile for, 34–35, **34**  
 database session persistence and, 321, 322–323, **323**  
 Deployment Manager profile for, 32–33, **32**  
 distributed local plug-in, 17, **17**  
 distributed remote plug-in, 38–41, **39, 40**  
 dynamic caching and, cluster-aware dynacache object caching (cache replication) in, 462–463, **463**  
 federating nodes for, 35–37, **35, 36, 37**  
 highly available/workload-managed (HA/WLM)  
 clustering and, 26  
 horizontal, 18–19, **19**, 300–308, **300, 301**  
 horizontal clustering, 18–19, **19**  
 architecture of, 301, **301**  
 creation of, 41–42, **41**  
 custom profile for, 302  
 Deployment Manager for creating, 303–304, **303, 304**  
 directory structure of, 307  
 distributed plug-in installation for, 303  
 federating node for, 302, 303  
 HTTP Server (IBM) installation for, 303  
 logging in, 308, **308**  
 naming, 304, **304**  
 prerequisite tasks before creation of, 302–303

- clustering, horizontal, *continued*
  - profile configuration for, 302
  - reviewing information about, 305, **305**
  - second and additional, 305, **305**
  - verifying configuration of, 305–307, **306, 307**
  - weight value (numbers) for, 304, **304**
  - with highly available/workload-management (HA/WLM)), 18–19, **19**
  - workload management configuration for, 305–307, **306**
- Load Balancer and, 377–378, **377**
  - IP addresses for, 354–355
  - high availability and, 416–417, **416, 417**, 418, **418**, 431–432, **432**
- memory-to-memory replication and, 309
- request processing in, 285–287, **286**
- Service Integration Bus (SIBus) and, adding server or cluster as member of, 644–645, **645**
- vertical, 17–18, **17, 18**
  - applications selected for, 291, **291**
  - create and configure, 287–300
  - Deployment Manager setup for, 290–294, **291**
  - directory structure for, 299, **299**
  - federating node for, 289, **290**
  - host alias configuration for, 296–298, **297, 298**
  - HTTP Server (IBM) installation for, 290
  - logging in, 299, **300**
  - naming, 292–293, **293**
  - new cluster creation in, 291, **292**
  - plug-in installation for, 290
  - port assignment for, 289, 298, **298**
  - prerequisite tasks for, 288–290, **288**
  - profile creation for, 288–289, **288, 289**
  - reviewing information about, 294, **294**
  - second and additional cluster creation in, 293, **293**
  - verifying, 294–296, **294, 295, 296**
  - virtual host configuration for, 296–298, **296**
  - weight values (numbers) for, 292, **293**
  - with distributed remote plug-in, 17–18, **18**
  - workload management in, 294–296, **294, 295, 296**
- Collector Tool, 668–676
  - analyzing output of, 670–671
  - full mode output, 674
  - IBM Support use of, 668–669
  - installation directory run of, 673
  - JAR files used by, 668–669, 674–675
  - running, 669–670
  - sample output from **673–676**
  - summary mode for, 672–673, 675–676
  - text file created from, 676
  - tips and suggestions for better use of, 671–672
  - Unix systems and, 672
  - Windows systems and, 672
- color coding in logs, 679
- common secure interoperability (CSI) option, 477, **478**
- conf directory, HTTP Server (IBM) and, 122
- configuration, 25–50
  - application scope in, 23
  - archiving of, 23
  - BackupConfig archive and, 684–685, **685–686**
  - cluster scope, 23
  - highly available/workload-managed (HA/WLM) clustered environment. *See* highly available/workload management
  - RestoreConfig archive and, 686, **686–687**
  - scopes in, 23
- configuration repertoires, Secure Sockets Layer (SSL) and, 592, 593, **594, 595**
- Configuration Tool, IBM Tivoli Directory Server (ITDS) and, 523, **523, 524**, 556–557
- connection factory, WebSphere Bank and, 718, 722, **722**
- console, 273–274, **273**
- container branches, IBM Tivoli Directory Server (ITDS) and, 532–535, **533, 534, 535**
- content-based load balancing and CBR, 354, 397–412, **399**
  - adding HTTP servers for, 404–406, **405, 406**
  - client gateway address for, 400–401, **401**
  - cluster address for, 401–402, **402**
  - configuring, 409–412, **410, 411**
  - Dispatcher configuration for, 400–412, 407, **407**
  - forwarding method selection in, 403–404, **403**
  - high availability and, 413
  - interface address for, 402, **402**
  - IP address assignment for, 400
  - Load Balancer high availability and, 413
  - Network Address Translation/Network Address Port Translation (NAT/NAPT) processing in, 397–412
  - port assignment for, 403–404, **403**
  - return address, in, 399, 404, **404**
    - content-based load balancing and, 399
  - starting manager and advisor functions in, 406–407, **406, 407**
  - verifying forwarding from command prompt in, 408, **408**
  - verifying request spraying in, 409
- Content-Based Routing (CBR) request processing. *See* content-based load balancing
- core groups, high availability manager and, 345–346, **345, 346**
- Cryptographic Message Syntax (CMS), 561
- custom Java administrative client creation, 749–761
- custom profiles, 15, 34–35, **34**, 216–222, **217**
  - creating application server on, after federation, 245–248, **246, 247, 248**
  - directory structure after creation of, 220, **220, 221**
  - federating node within, 244–245, **245**
  - federating to Deployment Manager of, 217–218, **218**

application invocation in, 248, **249**

application server command prompt for, 242–245,  
**243**, **245**

cell management following, 249–251, **250**

backup and recovery of cell in, 251

starting application server, 251

starting node agent process in, 250, **250**

creating application server on custom profile node

after federation, 245–248, **246**, **247**, **248**

custom profile for, 34–35, **34**, 244–245, **245**

Deployment Manager admin console for, 232–242

add nodes in, 234, **234**

directory structure after federation and, 240–241,

**240**, **241**

federating additional nodes, 241–242, **241**, **242**

host name and SOAP address port assignment to  
nodes in, 234–235, **235**

logging process of, 236, **236**, **237**

removing admin capability in, automatic, 240, **240**

Service Integration Bus (SIBus) and messaging  
engines inclusion in, 235

verifying, using admin console, 237–239, **237**, **238**, **239**

verifying, using log files, 236–237, **236**, **237**

Windows service selection for, 235, **235**, 239–240

directory structure after, 240–241, **240**, **241**

errors in, 252–254, **252**, 253*t*, **253**, **254**

horizontal clustering and, 302, 303

logging process of, 236, **236**, **237**, 252–254, **252**, 253*t*,  
**253**, **254**

Network Deployment package product binaries and, 156

pre-federation tasks for, 230–232

navigate application servers before federation in,  
231–232, **231**

navigate Deployment Manager before federation in,  
232, **232**, 242–423

remote, managed node of distributed plug-in and, 271

starting node agent process in, 250, **250**

vertical clustering and, 289, **290**

file transfer applications, 53

file transfer protocol (FTP), 701

Firefox browser, importing public certificate from,  
570–573, **572**

First Failure Data Capture tool, 676–677

First Steps console

Network Deployment package

application server profile and, 212–213, **213**

deployment manager and, verifying installation  
using, 201, **201**, **202**

application server and, 63, 67–68, **67**

fix packs, 606. *See also* product update installation

Network Deployment package application server  
profile and, 215

application server and, 63–64

fixes (interim fixes, efixes) and, 606

freeform applications, WebSphere Rapid Deployment  
(WRD)

automatic deployment of, 735–741

command-line notification for update to, **740**, **741**

configuration of, **735**

HelloWorld.java source file in, **736–738**

modifying HelloWorld output string in, **739–740**

notification of successful deployment in, **738–739**

## G

garbage collection (GC), 690–692, **691**, **692**

groups registry, in security, 474, **475**, 481–482, **481**

## H

hardware,

minimum requirements, for highly

available/workload-managed (HA/WLM)

clustering and, 29

heap dump analysis, 683–684, 683*t*, **684**

heartbeat option, Load Balancer high availability and,  
420–421, **420**, **421**, 430

hello servlet, verifying installation and, 70, **70**

HelloWorld.java source file, **736–738**

  - Secure Sockets Layer (SSL) and configuration of, 561–570
  - security alert concerning expired/mismatched certificates and, 568–569, **569**
  - security components for, 116, **117**
  - security values for, 131
  - session persistence and, 25, 43–46, **44**, **45**, **46**, 309–336. *See also* session persistence
  - silent installation of, 130–133
    - Admin rights required for, 130
    - directory setup for, 131, 132
    - Fast Response Cache Accelerator in, 131
    - license agreement in, 131
    - port configuration for, 132
    - response files for, 131, 132
    - security values for, 131
    - verifying installation of, 133
    - Windows service for, 131–132, **132**
  - starting, 123
  - starting HTTP Admin Server in, 123–124
  - static content on, 9, 122
  - stopping, 123
  - stopping HTTP Admin Server in, 123–124
  - temporary (TMP) directory setup for, 113–114
  - testing connection for, 568–570, **569**
  - tracing and, configuring for, 129–130, **130**
  - uninstall directory for, 123
  - uninstalling, 126
  - upgrading, 115–116, **116**
  - verifying installation of, 118–120, 134–135
    - log files for, 119
    - Windows services panel for, 119–120, **119**
  - virtual host creation for, 562, 567–568
  - Welcome page for, 38, **38**, 114, **115**, **121**, 419, **419**
  - Windows service for, 117–118, **118**, 131–132, **132**, 134
- HTTP servers
- distributed remote plug-in installation for, 38–41, **39**, **40**
  - dynamic cache and, 49
  - Endpoint Listener (HTTP) application for, 647–648, **648**, **649**
  - horizontal clustering with highly available/workload-management (HA/WLM) for, 18–19, **19**
  - managed node status of, 38, **39**
  - port configuration and, 61
  - profiles for, 16
  - remote management of, 16
  - remote management of, using Deployment Manager, 41, **41**
  - Secure Sockets Layer (SSL) and, 50
  - session failover in, 314–320
  - session persistence and, 43–46, **44**, **45**, **46**
  - snoop servlet for, 34, **34**, **40**, **40**
  - unmanaged node status of, 39, **40**
- Hypertext Markup Language (HTML), 9

      - product binaries and, 163–170, **164**, 164–166*t*, **167**
    - Secure Sockets Layer (SSL) and, 597–598, **597**, **598**
    - Service Integration Bus (SIBus) and, 349, **350**
    - showlog tool for, 680–681, 681–**682**
    - strings for, trace and logging, 657–659, 659*t*
    - thread dumping in, 682–683
    - tracing and, 656–657
    - unit of work (UOW) entries in, 677–678
    - vertical clustering and, 299, **300**
  - logs directory
    - application server and, 64
    - HTTP Server (IBM) and, 122
  - loopback adapter, Load Balancer and, configuration for, 360–366, **362**, 381
- ## M
- Management Enterprise JavaBean (MEJB), 743
  - manager function of Dispatcher, 354
  - managing WebSphere Application Server v 6, 50, 655–697 . *See also* J2EE Management API
    - BackupConfig archive and, 684–685, **685–686**
    - Collector Tool for, 668–676
      - analyzing output of, 670–671
      - full mode output, 674
      - IBM Support use of, 668–669
      - installation directory run of, 673
      - JAR files used by, 668–669, 674–675
      - running, 669–670
      - sample output from 673–**676**
      - summary mode for, 672–673, 675–676
      - text file created from, 676
      - tips and suggestions for better use of, 671–672
      - Unix systems and, 672
      - Windows systems and, 672
    - dump name space utility in, 694, **694–697**, 743, **743–744**
    - First Failure Data Capture tool in, 676–677
    - heap dump analysis and, 683–684, 683*t*, **684**
    - Log Analyzer for, 677–683, **678**
      - color coding in, 679
      - icons used in, 679
      - showlog tool for, 680–681, **681–682**
      - Symptoms database and, updating, 680
      - thread dumping in, 682–683
      - unit of work (UOW) entries in, 677–678
    - Performance Monitoring Infrastructure (PMI) and, 687
    - performance monitoring with Tivoli Performance Viewer, 687–688, **688**
    - RestoreConfig archive and, 686, **686–687**
    - tracing for, 655–668
      - advanced format of, 666
      - application server trace service and, management of, 664–665
      - basic format of, 666
      - configuring, 659–660, **660**
      - diagnostic settings for, 666–668
      - Dump Files and, 668
      - Enable Log in, 667
      - enabling at server startup, 659–662, **660**, **661**
      - enabling on client and standalone applications, 663–664
      - enabling on running server, 662–663, **662**
      - fields in output of, 665–666
      - interpreting output from, 665–666
      - Log Analyzer format of, 666
      - logging and, 656–657

- Saving changes to configuration and, 668
  - strings for, trace and logging, 657–659, 659*t*
  - Trace Output format in, 668
  - Trace Output properties in, 667
  - verbose class loader in, 693, **693**
  - verbose garbage collection (GC) in, 690–692, **691**, **692**
  - version information using versionInfo command in, 689, **689–690**
  - mapping rules, Caching Proxy server and, 465, **465**
  - MBeans, 761–766
    - Admin Service interface for, 763
    - direct access of instance of, 763
    - factory class for, 762
    - JMX type, 761–762
    - JMXManageable and CustomService interface for, 763
    - registering, 762–766
    - SnoopMBean.java code, 764
    - SnoopMBean.xml code, **764–766**
    - SnoopMBeanImpl.java code, 764
  - Media Access Control (MAC) address request processing, Load Balancer and, 354
  - memory-to-memory replication, 309–320, **310**. *See also* session persistence
    - client-only mode in, 311
    - client–server mode in, 311
    - cluster members and, 309
    - hitcount to verify session failover, 315–320, **316–320**
    - HTTP session failover in, 314–320
    - log files for, 314
    - mode for, 311, 313, **313**
    - replication domain in, 309, 311–312, **312**
    - server-only mode in, 311
    - starting the cluster after, 313–314, **314**
    - tracing for, 314, **314**, 320
  - memory-to-memory session persistence, 43–44, **44**
  - messaging engine (ME), 23, 25, 337. *See also* Service Integration Bus (SIBus)
    - application server and, 8, 72–73, **73**
    - cluster specified for, 340, **341**
    - data store for, 339, **339**
    - default installation of, 21
    - federating nodes and, 235
    - highly available/workload-managed (HA/WLM) clustering and creation/configuration of, 46, **46**
    - Java Message Service in, 23
    - Network Deployment package application server profile and, 216
    - Service Integration Bus (SIBus) and, 637
    - SIBus creation in, 340–341, **340**, **341**
    - verifying messaging engine configuration and failover in, 341–342, **342**
    - workload sharing (optional) configuration for, 342–344, **343**, **344**
  - modules directory, HTTP Server (IBM) and, 122–123
  - monitor mode, WebSphere Rapid Deployment (WRD) and, 733
  - Monitoring tool, Load Balancer, 48, **48**
  - multiple Web servers with multiple application server profiles, 170–175, **171–175**
  - multiprofile local or remote plug-in for, 11–12, **12**
- ## N
- namespace, dump name space utility for, 694, **694–697**, 743, **743–744**
  - netstat command, 31, **31**
  - Network Address Translation/Network Address Port Translation (NAT/NAPT) processing
    - content-based load balancing and, 397–412
    - Load Balancer and, 354, 397–412
  - Network Deployment package for WAS V.6, 3, **3**, 5–6, **5**, 13–14, **13**, 183–227
    - application invocation in, 248, **249**
    - application server profile and, 51, 183, 207–216, **208**
      - adding new features to, 216
      - backup and recovery for, 216
      - directory structure after creation of, 211–212, **212**
      - directory structure for, 208–209
      - fix packs applied to, 215
      - log files for, 211
      - logging during creation of, 213, **214**, 214–215*t*
      - managing the environment for, 216
      - messaging engine enabling for, 216
      - multiple profiles for, 216
      - naming profile for, 208
      - node and host name for, 209, **209**
      - port configuration for, 209–210, **209**, **210**
      - product binary installation for, 208
      - Profile Creation wizard for, 208
      - Service Integration Bus (SIBus) configuration for, 216
      - Service Integration Bus Web Services Enablement (SIBWS) and, 216
        - verifying creation of, using First Steps, 212–213, **213**
        - Windows service selection for, 210–211
    - architecture of, 16–19, **17**, **18**, **19**, 184, **184**
    - Caching Proxy and, 435. *See also* dynamic caching
    - custom profile in, 183, 216–222, **217**
      - directory structure after creation of, 220, **220**, **221**
      - directory structure for, 218
      - federating to Deployment Manager, 217–218, **218**
      - logging problems and, 221, **221**, 222*t*
      - naming, 218
      - node and host name for, 219, **219**
      - port configuration for, 219
      - product binaries installation for, 217
      - Profile Creation wizard for, 217
      - verifying installation of, 219, 220

- Network Deployment package for WAS V.6, *continued*
  - database support in, 16
  - DB2 and, 16
  - deployment manager for, 183, 194–207
    - admin console connection for, 204
    - backup and recovery for, 204–205
    - connecting to, through admin console, 202
    - creating profile for, 194–207, **194**
    - directory structure for, 195–196, **196**, 199
    - directory structure after, 199–200, **200**
    - log file for, 199, **199**
    - logging with, 205–207, **206**, 206–207*t*
    - managing, 203–205
    - naming, 195, **195**
    - network interface cards (NICs) and, 196
    - node, host, and cell names for, 196–197, **197**
    - port configuration for, 197–198, **197**
    - starting, 203, **204**
    - status checking of, 204
    - stopping, 203
    - verifying creation of, using First Steps console for, 201, **201**, **202**
    - verifying installation of, 199
    - Windows service selection for, 198, **198**, **199**, 202–203, **203**
  - directory structure for, 186, **186**, 188, **188**, 189
    - after application server profile creation, 211–212, **212**
    - after custom profile creation, 220, **220**, **221**
    - after deployment manager installation, 199–200, **200**
    - after product binary installation, 190–191, **191**
  - disk space requirements for, 187
  - distributed local plug-in for, 17, **17**
  - distributed remote plug-in for, 38–41, **39**, **40**
  - dynamic caching and. *See* dynamic caching, 435

  - naming the Web server for, 180
  - port configuration for, 180
  - response files and temporary directory for, 178–179
  - verifying, 182
  - Web server selection for, 179, **179**
- unconfiguring Web server definition from application server and, 177–178, **178**
- uninstalling, 176–178
- vertical clustering and, 17–18, **17**, **18**
- plug-ins, 4, 25
  - highly available/workload-managed (HA/WLM) clustering and, 26
- policies
  - dynamic caching and, 444, **445**
  - Service Integration Bus (SIBus), 346–348, **346**, **347**
- port configuration
  - admin console and, 59–60, 197–198
  - application server and, 59–61, **60**, 86, 87, **87**, 105
  - bootstrap, 61, 198
  - content-based load balancing and, 403–404, **403**
  - federating nodes and, 234–235, **235**
  - highly available/workload-managed (HA/WLM) clustering and, 30–31, 30*t*
  - HTTP Server (IBM) and, 117–**117**, 132
  - HTTP transport, 61
  - IBM Tivoli Directory Server (ITDS), 516, 520, **520**
  - Load Balancer and, 377, 378, **378**
  - local plug-in for HTTP Server and, 139, 144–145, **145**
  - netstat command for, 31, **31**
  - Network Deployment package and, 185–186, 185
    - application server profile and, 209–210, **209**, **210**
    - custom profile and, 219
    - deployment manager and, 197–198, **197**
  - plug-in for HTTP Server and, 180
  - profile creation and, 76, **76**
  - Secure Sockets Layer (SSL) and, 554–555, **554**
  - security and, 490
  - Simple Object Access Protocol (SOAP), 61, 198
  - snoop servlet for, 34, **34**, 40, **40**
  - vertical clustering and, 289, 298, **298**
- principals, IBM Tivoli Directory Server (ITDS) and, 536

- processes, registration of, 50
  - product update installation, 50, 605–625
    - application server and, 606, 607–608
    - backing up your configuration before, 612, **612**
    - concurrent updates and, 607
    - Deployment Manager and, 606–607
    - environments amenable to, 606
    - fix packs and, 606
    - fixes (interim fixes, efixes) and, 606
    - HTTP Server (IBM) and, 615–617, **616, 617**
    - Java processes stopped for, 611
    - list of updates for, 609–611, **610, 611**
    - Load Balancer, 620–625, **621–625**
    - plug-in for HTTP Server and, 617–620, **618, 619**
    - profiles and, 607
    - readme documents for, 611
    - refresh packs and, 606
    - releases and, 606
    - restarting and testing following, 614–615
    - step by step for, 607–608
    - symbolic file system reference for, 608, 608*t*
    - terminology used when referring to, 605, 605*t*
    - uninstalling interim fixes and, 613
    - unzipping archive files for, 613
    - update installer tool for, 606
    - update program run for, 613–614, **613, 614**
    - version determination for, 608–609
    - versionInfo utility for, 606, 608–609, **609**
    - WebSphere and, 606–608
  - Profile Creation Wizard, 74–76
  - profiles, 8–9, **9**
    - application server and, 8–9, **9, 33–34, 33, 52, 53, 65, 65, 73–77, 74, 93, 207–216, 208**
    - BackupConfig archive and, 684–685, **685–686**
    - Base package and creation of, 8
    - command prompt, 74
    - custom, 15–16, 34–35, **34**
    - default vs. subsequent, 75–76
    - Deployment Manager and, 15, 32–33, **32, 194–207, 194**
    - directory for, 76, 77, **77**
    - Express package and creation of, 8
    - horizontal clustering and, 302
    - HTTP servers and, 16
    - local plug-in for HTTP Server and, multiprofile environments and, 146
    - multiple application servers and, Deployment Manager admin console and, 16–17, **17**
    - multiprofile environments, 170–175, **171–175**
    - multiprofile local or remote plug-in for, 11–12, **12**
    - naming, 75, **75**
    - Network Deployment package
      - creation of, 8, 14–16, **15, 183**
      - silent installation and, 225, 226
    - node and host names for, 76
    - port configuration for, 76, **76**
    - product update installation and, 607
    - Profile Creation Wizard for, 74–76
    - remote HTTP server management and, 16
    - RestoreConfig archive and, 686, **686–687**
    - snoop servlet for, 34, **34**
    - templates for, 8–9, **9, 14–15, 15**
    - verifying creation of, 77
    - Windows services for, choosing, 77
  - profiles directory, application server and, 65
  - profileTemplates directory, application server and, 65
  - public key infrastructure (PKI)
    - Secure Sockets Layer (SSL) and HTTP Server (IBM) and, 561, 563–567, **563–566**
  - public key infrastructure (PKI) certificates, 479

  - remote plug-in. *See* plug-in for HTTP Server
  - replication, Data Replication Service (DRS) and, 24
  - replication domain, 309, 311–312, **312**
  - request processing
    - clustering (horizontal and vertical) and, 285–287, **286**
    - distributed plug-in for HTTP Server and, 258–259, **258**
    - dynamic caching and, 436
  - resource adapter (RAR) files, packaging in J2EE and, 702
  - return address, content-based load balancing and, 404, **404**
  - roles, in packaging J2EE, 702–704
  - route delete command and routing tables, 364, **364**

route print command and routing table verification, Load Balancer and, **360**, **363**, **363**

rule-based load balancing

- adding HTTP server to cluster for, 392–393, **392**, **393**
- adding IP address rule for restricted users in, 393–394, **394**
- adding IP address rule for unrestricted users in, 394–395, **395**
- Always True rule in, 395–396, **396**
- Load Balancer and, 390–397
- review and test, 396–397, **397**
- rule options selection for, 391–392, **391**
- stickymask (affinity address mask) for, 390

runtime containers, packaging in J2EE and, 700

## S

samples directory, application server and, 65

sandbox.com test certificate, 570, **570**

scopes, in configuration of resources and variables, 23

scripts, Load Balancer high availability and, 424–428, 425, **426**, **427**

search filter, IBM Tivoli Directory Server (ITDS) and, 558

Secure Sockets Layer (SSL), 50, 559–603

- accelerators for, 561
- certificate authority certificates, 559, 575–583
  - certificate signing request (CSR) for, 576–579, **577**, **578**
  - copying key file artifacts for, 583
  - copying text of, Begin and End Certificate markers for, 575
  - iKeyman utility for, 575
  - labels in, 581–582
  - opening key file for, 575–576, **576**
  - receiving VeriSign signed certificate for, 580–581, **581**
  - testing configuration for, 583
  - VeriSign certificate signing request (CSR) for, 576–579, **577**, **578**
  - VeriSign free trial certificate for, 578, **578**
  - VeriSign Test CA Root certificate for, 579–580, **580**, 582–583, **583**
- configuration repertoires for, 592, 593, **594**, **595**
- connection establishment for, 559
- Cryptographic Message Syntax (CMS) and, 561
- encryption in, 559
- handshake (client/server) in, 560, **560**
- HTTP Server (IBM), 561–570
  - public key infrastructure (PKI) for, 561, 563–567, **563–566**
  - sandbox.com test certificate for, 570, **570**
  - security alert concerning expired/mismatched certificates and, 568–569, **569**
  - symbolic file system references for, 562, 562*t*
  - testing connection for, 568–570, **569**
  - virtual host creation for, 562, 567–568
- HTTP Server plug-in–application server
  - application server setup for, 588–592, **589**
  - configuration between, 584–592
  - configuration repertoires for, 592, 593, **594**, **595**
  - copying key and trust files to other nodes for, 591
  - creating self-signed certificate for, 586–587, **587**, 589
  - deleting signer certificates for, 586, **587**, 589
  - directory creation for key and trust files in, 588
  - extracting certificate from Web container key for, 590
  - extracting certificate from plug-in key for, 588
  - importing plug-in certificate for, 590–591, **590**, **591**
  - inbound channel selection for, 594, **595**
  - key file creation for, 588–589, **589**
  - managing SSL artifacts in, 593, **593**
  - password setup for, 586, **586**
  - plug-in setup for, 584–588, **585**
  - selecting server Web container for, 594, **594**
  - testing connection for, 596
  - troubleshooting connection for, 597–598, **597**, **598**
  - trust file creation for, 590
  - validity period for, 587, 589
  - virtual host and aliases for, 595–596, **595**
  - Web container, configuring between, 592–598
- IBM Tivoli Directory Server (ITDS) and, 515, 546–551
- iKeyman utility in, 561, 575
- importing public certificate from a browser for
  - Firefox browser and, 570–573, **572**
  - Internet Explorer and, 571, **571**, 573–575, **573**, **574**, **575**
- importing public certificate into a browser for, 570–583
- inbound channel selection for, 594, **595**
- Java Key Store (JKS) key files and, 561
- lightweight directory access protocol (LDAP) and, 489, 491, 598–603
- logging in, 597–598, **597**, **598**
- managing SSL artifacts in, 593, **593**
- passwords and, 586, **586**
- performance cost limitations of, 561
- port configuration and, 30–31, 30*t*
- public key infrastructure (PKI) for, 561, 563–567, **563–566**
- sandbox.com test certificate for, 570, **570**
- security alert concerning expired/mismatched certificates and, 568–569, **569**
- SSL configuration repertoires and, 498–499, **498**, **499**
- testing connection for, 568–570, **569**, 596
- troubleshooting connection for, 597–598, **597**, **598**
- validity period for, 587, 589

- virtual host and aliases for, 595–596, **595**, 562, 567–568
- Web container certificate added to plug-in key file for, 591–592, **592**
- WebSphere and ITDS, 598–603
  - ITDS public key certificate added to WebSphere trust file, 599–602, **600**, **601**
  - lightweight third party authentication (LTPA) and, 602–603
  - WebSphere configured for, with LDAP registry communications, 602–603
- security, 49, 469–514
  - active protocol list options in, 477, **478**, 494
  - admin roles in, 513–514, **514**
  - administrator identification for, 496–497, **497**, 480, **481**, 487–488, **488**
  - application server and, 8
  - authentication in, 469, 493
  - authorization in, 469
  - cache timeout values in, 477, **478**, 484, 486, 494
  - case sensitivity for authentication in, 491
  - cells and, 483–487, 495–496, **496**
  - client key file creation in, 508, **508**
  - common secure interoperability (CSI) option in, 477, **478**
  - console group creation for, 487–488, **488**, 496–497, **497**
  - copying key and trust files to nodes, 506, 511
  - creating registry files for, 470–472
  - custom registries in, 469, 470–482
    - active protocol list options in, 477, **478**
    - administrator identification for, 480, **481**
    - cache timeout values in, 477, **478**
    - common secure interoperability (CSI) option in, 477, **478**
    - creating registry files for, 470–472
    - enabling, 476–477
    - error messages on configuration of, 477
    - groups registry in, 474, **475**, 481–482, **481**
    - Java 2 security option in, 477, **478**
    - lightweight third party authentication (LTPA) in, 472–482, 477, **478**
    - multiple machines and, 471
    - object request brokers (ORBs) in, 477, **478**
    - passwords in, 475–476, **476**, 479, **480**
    - public key infrastructure (PKI) certificates in, 479
    - remote method invocation/Internet InterORB protocol (RMI/IIOP) and, 477, **478**
    - single signon (SSO) property in, 476, **476**
    - user name in, 479, **480**
    - user registry configuration in, 472–482, **473**, **474**
  - digital certificate store files, 498–513
    - adding WebSphere server certificate to trust file in, 505, **505**, **506**, 510–512, **512**
    - copying key and trust files to all nodes, 506, 511, 512
    - deleting signer certificates in, 502
    - dummy key and trust files shipped with WebSphere and, 470, 498, 499–507
    - iKeyman utility in, 499–507
    - key store files in, 498
    - new client key file creation in, 508, **508**
    - new key file creation in, 500, **500**, **501**
    - new trust file creation in, 504–505
    - passwords in, 513
    - replacing dummy files in, 507–513
    - replacing, 498–513, 498
    - self-signed certificate creation in, 502–504, **503**, **504**, 508–510, **509**
    - SSL configuration repertoires and, 498–499, **498**, **499**
    - trust file attribute setting for, 506, **507**
    - trust file creation in, 510
    - trust store files in, 498
    - updating client properties files for, 512
    - validity period setting in, 509
- digital certificates in, 469
- distinguished name (DN) in, 490–491
- domain name in, 484–485
- dummy key and trust files shipped with WebSphere and, 470, 498, 499–507
- enabling, 476–477
- error messages on configuration of, 477, **479**, 486, 495–496, **496**
- expired/mismatched certificates alert, 568–569, **569**
- global security option in, 485, **486**, 494, **494**
- groups registry in, 474, **475**, 481–482, **481**
- host names in, 490
- HTTP Server (IBM) and, 116, **117**
- iKeyman utility in, 499–507
- Java 2 Enterprise Edition (J2EE) in, 469
- Java 2 security option in, 477, **478**, 485–486
- Java Authorization Contract for Containers (JACC) and, 24
- key file creation in, 500, **500**, **501**
- key store files in, 498
- lightweight directory access protocol (LDAP) registry and, 469, 488–497
  - active protocol list options, 494
  - administrator identification for, 496–497, **497**
  - advanced settings (Additional Properties) for, 491–492, **493**
  - authentication in, 493
  - cache timeout values, 494
  - case sensitivity for authentication in, 491
  - console group creation for, 496–497, **497**
  - distinguished name (DN) for, 490–491
  - error messages on configuration of, 495–496, **496**
  - global security settings for, 494, **494**

- security, LDAP, *continued*
  - group filter options in, 491
