| <b>Revolution in IBM DB2 Performance: IBM DB2 Analytics Accelerator</b>     |            |
| <i>by Namik Hrle, Ruiping Li, and Wolfgang Hengstler</i> .....              | <i>1</i>   |
| Abstract .....  | 1          |
| Objectives .....  | 1          |
| Introduction.....   | 2          |
| What Is Business Analytics? .....   | 2          |
| How Business Analytics Can Help Your Organization.....                      | 3          |
| Key Design and Operational Features .....                                   | 6          |
| Query Execution Process Flow.....   | 8          |
| DB2 Analytics Accelerator Content Maintenance .....                         | 9          |
| DB2 Analytics Accelerator Table Definition and Deployment.....              | 10         |
| High-Performance Storage Saver .....  | 10         |
| Connectivity Options .....  | 10         |
| Disaster Recovery Considerations .....                                      | 10         |
| Query Acceleration Criteria .....   | 12         |
| Query Acceleration Control Knobs.....                                       | 12         |
| EXPLAIN Function .....  | 13         |
| System-Scope Instrumentation .....  | 16         |
| Thread-Scope Instrumentation.....   | 17         |
| DB2 Analytics Accelerator Administrative Stored Procedures .....            | 17         |
| DISPLAY ACCEerator Command .....  | 18         |
| Performance Considerations .....  | 19         |
| The PureData System for Analytics S-Blade, Based on Netezza Technology..... | 21         |
| Applying Data Stream Processing to DB2 Queries .....                        | 22         |
| Comparing PureData System for Analytics Appliance Models.....               | 23         |
| Minimizing Disk Failures .....  | 23         |

|                                  |    |
|----------------------------------|----|
| Minimizing S-Blade Failures..... | 23 |
| Summary.....                     | 23 |

**DB2 10 for z/OS Query Optimization Update**

|  |    |
|--|----|
| <i>by Terry Purcell</i> .....                                  | 27 |
| Access Path Management.....                                    | 28 |
| DB2 10 Takes Plan Management to the Next Level.....            | 32 |
| Predicate Processing and Runtime Optimizations.....            | 38 |
| Sort Performance Enhancements.....                             | 51 |
| New Choices for the Query Optimizer.....                       | 52 |
| Improving Parallelism Efficiency and Removing Limitations..... | 57 |
| Improving the Inputs to the Query Optimizer.....               | 61 |
| Summary.....   | 65 |

**Planning for IBM DB2 10 for z/OS Upgrade**

|  |     |
|--|-----|
| <i>by John Campbell</i> .....                    | 66  |
| Highlights of the Beta Program Testing.....      | 67  |
| Performance and Scalability.....                 | 70  |
| Availability.....                                | 86  |
| Other Issues.....                                | 88  |
| Incompatible Changes.....                        | 90  |
| Migration and Planning Considerations.....       | 91  |
| Items Planned for Post-GA Delivery.....          | 104 |
| When Should You Migrate to DB2 10 for z/OS?..... | 107 |
| Summary.....                                     | 108 |

**DB2 10 for z/OS Case Studies**

|  |     |
|--|-----|
| Kela Invests in Improving Service Delivery for Finland’s Citizens..... | 110 |
| Primerica Improves Efficiency and Gains More Flexibility.....          | 112 |
