A

ADDRESS service program, sending email from RPG program and, 131
ADO DB, real-time integration between PC and IBM i apps and, 39
agents, Lotus Domino, 21
ALL authority level, 14, 16–17
ALWOBJDIF, 18
Apache, 5, 141, 142
area charts. *See* column, line, and area chart creation
authority levels, 14, 16–17, 18
  granting and revoking, 18
authority-checking process, 14–17
authorization lists, 13–18
  authority levels used in, 14, 16–17
  authority-checking process for, 14–17
  benefits of using, 18
  FTP file transfers and, 13–18
  objects and, ALWOBJDIF, 18
  working in, WRKAUTL in, 17
AUTL authority, 15
automate data transfers using FTP, 9–18. *See also* automate FTP via LotusScript
  authority levels used in, 14, 16–17
  authority-checking process for, 14–17
  authorization lists in, 13–18
  auto-start mode for FTP server in, STRTCP in, 10
  batch transfers in, 11–12
  case sensitivity of commands in, 13
  checking start mode of FTP server in, CHGFTPA in, 10
  commands used in, 12–13
  security in, 11, 12, 34
  starting the FTP server, batch file for, 11–12
  starting the FTP server, STRTCP and auto-start mode for, 10
  stopping the FTP server, ENDTCPSVR in, 10
  testing the connection in, 11
  user names and passwords in, 11, 12
automate FTP via LotusScript, 19–30. *See also* automate data transfers using FTP
  agent creation in Lotus Domino, 21
  agent for, complete code for, 26–28
  declarations section of script for, 22–23
  document selection in, 22
  FOR cycle to process incoming email in, 24–25
  initialization procedure for, 23
  Lotus Domino mail servers and, 19
  LotusScript primer for, 20
  processing the files in, 25

RMTCMD and REXEC commands in, 28–30
sorting emails into folders and, 19–20

B
bar chart creation, 207–220
Bars of Stuff example in, 293–297
clearing the arrays in, 219
columns and rows in, 209–210, 217
data table in, 209–210
example of, 208
GenBarChart in, 211–216
Google API for, 207
header and footer sections in, 211, 217, 218–219
HTML file code for, 208–209
IF statement to test for errors in, 219
invoking GenBarChart in, 219
Piles of Money chart in, 297–301
rows in, 211, 217–218
Table API and chart interaction using, 301–313
titles for columns and horizontal axis in, 216
TSTGENBAR1 sample program for, 219
Bars of Stuff bar chart, 293–297
behaviors, in Java, 143–144
binding directory for service programs, 77
BLOBs, 321–334
Blob_In for, 323–324, 325, 327
Blob_Out for, 324–325, 329
creation of, 322
DB2 database and, uses of, 321–322
DDS caveats for, 322
definition of, as a nonnative object, 321
error handling for, 329
file and library names in, 334
file ID for, 325, 327, 329
file options used with, 325
generating a chart from, 331–333
Google charting API used with, 331–333
input parameters required for, 325
INSERTing, 324
Rtv_File_From_Archive in, 328–329
SELECTing, 325
size of, 322
Snd_File_To_Archive in, 325–327
SQFOVR in, 325
SQFRD and, 325
SQLTYPE(BLOB_FILE) in, 323, 324
table created to store, the report archive, 322
TST_RTV program for, 330–331
TST_SND program for, 329–330
uses for, 321–322
Boolean variables, 3
BOSS PlaceFinder Web Service, 360

C
CFGTCPSMTP, 135
CGIDEV2, 4, 189, 190
charts created in real-time and, 189, 190
CHANGE authority level, 14, 16–17
charts created in real-time, 189–320
bar chart creation in, 207–220, 293–297. *See also* bar chart creation
BLOB files used for, 331–333
CGIDEV2 in, 189, 190
column and line chart combo in, 290–293
column chart example in, 278
combo chart in, 285–293
Excel and, 190
gauge chart in, 251–263. *See also* gauge chart creation
geo map chart (GPS mode) in, 220, 239–251. *See also* geo map chart creation
geo map chart (location name mode) in, 220–239. *See also* geo map chart creation
Google APIs for, 190, 320. *See also* Google APIs
intensity map (heat map) chart in, 278–285. *See also* intensity map creation
line chart example, 277
pie chart in, 190–207, 333. *See also* pie chart creation
Piles of Money chart in, 297–301
SAP Business Objects and, 190
Table API and chart interactions in, 301–313. *See also* Table API and chart interactions
tooltips and hover text in, 220, 229, 238

tree map charts in, 313–320. *See also* tree map chart creation
CHGFTPA, 10
CHGLIBL, 46, 47
CHGTCPDMN, 135
classes, in Java, 143–147
Code Playground, Google, 301
column and line chart combo, 290–293
column, line, and area chart creation, 263–278
column chart derived from, 278
columns in, 263–264
example of, 276
GenCLAChart in, 266–271
Google API for, 263
Google corechart package and, 272
HTML files for, 263
line chart derived from, 277
looping through rows and cells in, 271–272
matrix style data in, 271
selecting the type of chart in, 272
template for, 264–266
TSTGENCLA1 in, 272, 273–276
TSTGENCLA2 in, 272, 277
TSTGENCLA3 in, 272
values in cells, and missing values, 272
combo chart creation, 285–293
column and line chart combo in, 290–293
Combo.tmpl template for, 288–289
customizing the two sets of data in, 289
Google API for, 286
HTML code for, 286–287
option selection and setting in, 289
options declaration in, 287–288
TSTGENCMB1 in, 290–293
TSTGENCMB2 in, 290–293

G
gauge chart creation, 251–263
customization in, 263
example of, 260
Gauge.tmpl template for, 252–254
GenGaugeChart in, 254–258, 262
Google API for, 251
HTML file for, 251–252
QCPYLESRC in, 260
Retrieve System Status (QWCRSSTS) used in sample for, 259, 260
TSTGENGAU1 program in, 258–259
TSTGENGAU2 program in, 259–263
WRKSYSSTS in, 259
GCHARTS folder, 202
GenBarChart, 211–216
GENCHRT service program, 285
GenCLAChart, 266–271
generic compilation instruction, 3–4
GenGaugeChart, 254–258
GenMapChart, 220, 223–227
GenMapGPSChart, 220, 241–245
GenPieChart, 196–200
GenTreeMapChart, 317
Geo Chart API, 251
geo map chart (GPS mode), 220, 239–251
colors in, RGB notation and, 250
column title in, 245
columns in, 240
customization of, 250
example of, 249
Flash chart generator and, 251
GenMapGPSChart for, 220, 241–245
Geo Chart API in, 251
GeoMapGPS.Tmpl for, 240–241
Google API for, 239–240
GPS coordinate system in, 239
latitude and longitude in, 240, 246
options selection and setting in, 241
rows in, 245–246
template for, 240
TSTGENMAP3 program in, 246–248
TSTGENMAP4 program in, 249–250
Visual Playground (Google) and, 250
geo map chart (location name mode) creation, 220–239
colors and patterns in, 236–238
columns for, 220
dynamic option handling in, OptionsBegin, Options, OptionsEnd in, 231–232
example of, 235–236
GenMapChart for, 220, 223–227
GeoMap.Tmpl template for, 222–223
Google API for, 220
header and footer sections in, 223, 229, 232–233
HoverColumn and HoverRow in, 223, 230
HTML sample code for, 221
location name selection for, 220

options and option selection/setting in, 222, 228, 231, 239
parameters for, 228
processing input for, 229
rows in, 223, 230–231
tooltips and hover text in, 220, 229, 238
TSTGENMAP in, 233–234
zoom-in feature, 236
geo-referencing, 2
geocoding, 337. *See also* GPS-enabled database
