Contents

Preface xiii

Chapter 1: Introduction 1
  Who Needs CL? 1
  Who Has CL? 1
  Capabilities of CL 2
  Limitations of CL 2

Chapter 2: A First Look at CL 3
  The Parts of a CL Procedure 3
    The PGM Command 4
    The COPYRIGHT Command 4
    The Declarations 5
    Global MONMSG 6
    The Body of a Procedure 7
    The ENDPGM Command 7
    The INCLUDE Command 8
  Entering the Source Code 8
  Using SEU 9
    The Source Physical File 9
    Starting SEU 9
    Formatting the Statements with F4 9
    Uppercase or Lowercase? 14
    Positional Parameters or Keywords? 14
    Continuing on the Next Line 16
    Indented or Unindented? 17
  Compiling the Procedure 17
    The CRTBNDC1 Command 17
    Output of CRTBNDC1 18
  Executing the Program 18
  Optional Components of a CL Procedure 19

Contents

RMVMSG (Remove Messages) 127
SNDRPY (Send Reply) 129
SNDMSG (Send Message) 129
SNDBRKMSG (Send Break Message) 130
DSPMSG and WRKMSG 131
CLRMSGQ (Clear Message Queue) 133
The System Reply List 133
Purpose of the System Reply List 134
Using the System Reply List 134
Pitfalls 134
Message Subfiles 134
The Display File 135
The CL Program 138

Chapter 7: Interprogram and Intermodule Communications 143
Using Parameters 143
Parameter Variables 144
Parameter Constants 145
Limitations 145
Using Data Areas 146
The CRTDTAARA and DLTDTAARA Commands 146
The CHGDTAARA, RTVDTAARA, and DSPDTAARA Commands 147
Special Data Areas 148
Using Switches 149
Turning Switches On and Off 149
Testing the Switches 149
Using the Switches 150
Using Messages 151
Another Look at SNDPGMMSG 151
Another Look at RCVMSG 152
Using Data Queues 153
Types of Data Queues 153
The CRTDTAQ and DLTDTAQ Commands 153
Sending, Receiving, and Clearing Data Queues 154
Retrieving Data Queue Description 158
Receiving from Data Queue Without Deletion 160
Utility Commands 162
Advantages of Data Queues 163
Disadvantages of Data Queues 164

Chapter 8: Job and System Interface 165
Library List Support 165
Retrieving System Values 167
Changing System Values 170
The RTVJOBA and CHGJOB Commands 170
The RTVUSRPRF, CHGUSRPRF, and CHGPRF Commands 173
The RTVNETA Command 174
Summary of the Retrieve (RTV) Commands 175

Chapter 9: Using Files 177
Record-By-Record Processing of a File 177
The DCLF Command 177
The RCVF, WAIT, and ENDRCV Commands 178
RCVF and Random Input 179
The SNDF and SNDRCVF Commands 181
The CLOSE Command 183
Processing a File as a Whole 183
Creating and Deleting Files 183
Processing Database File Members 184
The OVRxxxF and DLTOVR Commands 185
Sorting with OPNQRYF 187
Capturing Output Using QTEMP 189
Using Permanent Work Files 190
Using Outfiles 191
Capturing OUTPUT(*PRINT) 194
SQL Support 195
RUNSQL 196

Chapter 10: Using Quotes 197
Using Quotes in CL 197
Embedded Quotes 198
Expressions, Character Strings, and Command Strings 199
Multiple Quotes 199
Using an &QUOTE Variable 200

Chapter 11: Managing Objects 203
Creating Objects: The CRTXXX Commands 203
Deleting Objects: The DLTXXX Commands 204
Checking Existence: The CHKOBJ Command 205
Retrieving Description: The RTVOBJD Command 207
Retrieving Description: The RTVMBRD Command 209
Creating Duplicates: The CRTDUPOBJ Command 210
Manipulating Objects: MOVOBJ, CHGOBJD, and RNMOBJ 211
Allocating: The ALCOBJ Command 212

Chapter 12: Batch Job Processing 217
The Concept of Batch Processing 217
Job Queues 217
The SBMJOB Command 218
An Unexpected Problem with SBMJOB 220
Working with Submitted Jobs 223
The QSYSOPR Message Queue 223
Self-Submitting Programs 224

Chapter 13: Advanced Topics 229
How to Code Selective Prompting 229
A Common Mistake 230
Making the Prompt Selective 232
Notes 233
Using QCMDCHECK
   Calling QCMDCHECK 234
   Selective Prompting and QCMDCHECK 235
Using QCMDXEC 236
   Why Bother with QCMDXEC in CL? 237
   Commands Not Allowed 239
Using QCLSCAN 239
   Calling QCLSCAN 240
Using QDCXLATE 242
   Standard Translations 242
Using DLYJOB 243
   DLYJOB with DLY 244
   DLYJOB with RSMTIME 244
Using RCLRSC and RCLACTGRP 244
Retrieving CL Source 245
   The RTVCLSRC Command 245

Chapter 14: Security Considerations 247
Securing the *PGM Object 247
   An Example 247
   Securing an Object 248
   Take Care of *PUBLIC 248
Authority 249
   Ownership 249
   Adopting Authority 249
   Another Example 250
   Adopted Authority from Other Programs in the Call Stack 251
   Other Risks of Adopted Authority 251
Command Lines 252
   Limited Capabilities 252
   Pros and Cons of Command Lines 253
   When Command Lines Appear 253
Chapter 15: Sign-on Programs 255
  Using Job Descriptions 255
  What Job Descriptions Cannot Do 256
  Sample Sign-On Program 256

Chapter 16: Debugging 265
  The STRDBG Command 265
  The ENDDBG Command 266
  Debugging Views 266
  An Example Interactive Debugging Session 266
  Debugging in Source View 270
  Other Important Debugger Commands 275
  Summary of Debugger Commands 275
  Debugging in List View 276
  Debugging in Statement View 277
    Encrypting the *LIST View 278
    OPM Programs and the ILE Debugger 279
  Debugging Another Job 279
  The DMPCLPGM Command 285

Chapter 17: CL and the Integrated Language Environment 289
  Types of Object Code 289
  Binding 289
    Binding by Copy 290
    Binding by Reference 291
    The Dynamic Call 291
  Compilation 292
    CRTCLMOD 292
    CRTSRVPGM 292
    CRTPGM 293
    CRTBNDC1 293
  Activation Groups 293
    The Default Activation Group 294
ACTGRP(identifier) 294
ACTGRP(*NEW) 294
ACTGRP(*CALLER) 294
Destroying Activation Groups 295

Parameter Descriptions 295
PGM: Program Name 296
SRCFILE: Source File Name 296
SRCMBR: Source Member Name 296
TEXT: Text Description 296
DFTACTGRP: Default Activation Group 297
OPTION: Compiler Listing Options 297
USRPRF: Assumed User Profile 297
LOG: Log Commands 298
REPLACE: Replace Existing Program 298
TGTRLS: Target Release 298
AUT: Public Authority 299
SRTSEQ: Sort Sequence 299
LANGID: Language ID 299
DBGVIEW: Debugging View 300
ENBPFRCOL: Enable Performance Collection 300
ACTGRP: Activation Group Name 300
OPTIMIZE: Optimization 300

Appendix A: Some Utility Commands 301
Appendix B: CL Coding Style 401
Appendix C: Sample Sign-on Program 433
Appendix D: The Original Program Model 437
Index 439
